Technyl A 20

III.2 pg. 3 of 7

Technyl A 20 V 25

Description	The range of TECHNYL type 6.6 polyamides includes two grades with improved fire resistance: - TECHNYL A 20: an unreinforced 6.6, heat-stabilised, of medium viscosity	- TECHNYL A 20 V 25: a 6.6 reinforced with glass fibre and heat-stabilised. These two grades include an halogen-free flame retardant system.
Specific properties	- UL 94 V-0 flame class in a thickness of 0.8 mm - high rigidity: modulus 3 200 to 7 500 MPa dry - heat stability: deflection	temperature under load (1.80 MPa): 240 to 250°C - tracking resistance: KC 575 and 375.
Applications	A 20 and A 20 V 25 are mostly used in the electrical and electrical engineering industries for parts such	as connector blocks, switch cases, isolators, coil formers, switches, programmer components, etc...
Packaging	These grades are supplied in ready to use airtight bags.	Standard colours: natural (brick red) and black. Certain dark colours can be supplied on request.

Properties

LR 53335-17

III.2 p. 4 of 7

Nowadays, specifications increasingly require the use of polyamides with improved fire resistance.
A 20 and A 20 V 25 are designed to meet the highest standards, in particular the Underwriters Laboratories approval tests.
UL 94 test - UL approval of engineering plastics is granted according to the following characteristics :
– flame class, governed by standard UL 94
– temperature indices under standard UL 746B
– basic properties under standard UL 746A.
There are four flame classes :

class	combustion test
UL 94 HB	horizontal specimen
UL 94 V-2	vertical specimen
UL 94 V-1	vertical specimen
UL 94 V-0	vertical specimen

The results are given for each material, in each colour, and in a given thickness. This last point, the thickness, is very important because comparisons with other materials can only be made for an equivalent thickness.
Limit oxygen index (LOI) -
This is also a common criterion.
A substance which burns has an LOI of less than 21. The higher the index, the less flammable the substance will be.
Table 1, which gives the principal measurements of fire resistance, shows the very good performances of A 20 and A 20 V 25 grades :
– V-0 rated for thicknesses of 0.8 mm, i.e. very thin.
The high mechanical properties of TECHNYL grades, even at such thicknesses, meet the current need for increasingly compact assemblies,
– limit oxygen index over 30,
– non-corrosive fumes.

Properties	Norm	A 20	A 20 V 25
Flammability	UL 94 - 0.8 mm thick 1.6 mm thick ISO R 1210 - 3.17 mm thick	V-0 V-0 category 1 II b grade	V-0 V-0 category 1 II b grade
Fire resistance (epiradiator class)	Rhône-Poulenc evaluation under NF P 92 501 3.2. mm thick	M 3	M 3
Heated finger at 300 °C	VDE 0470 NF C 62-411	satisfactory good	satisfactory good
Hot wire at 960 °C	VDE 0471 - 3.1 mm thick	good	good
Oxygen index	ASTM D 2763-70	31.5	30.5
Smoke corrosiveness	UTE C 20 453	< 20 %	< 20 %
Flash point	ISO R 811	> 350 °C	> 350 °C

Table 1

Mechanical and thermal properties.

A 20 and A 20 V 25 are type 6.6 polyamides, and therefore have good mechanical and thermal properties.
The summary table gives the main properties at relative humidities of 0 and 50 %
In particular, the high modulus and deflection temperature under load should be noted.

Reaction to thermal ageing.

Table 2 shows the mechanical properties of the two grades after 7 days' thermal ageing at 125 °C, compared with the initial characteristics in a dry state.
The good reaction to thermal ageing of A 20 and A 20 V 25 can be seen.

Tracking resistance.

The tracking resistance test is used for materials in contact with live metal parts.
Both grades maintain a good tracking resistance of KC 575 and 375.

		Unit	Dry state - 23 °C		After 7 days' ageing at 125 °C	
			A 20	A 20 V 25	A 20	A 20 V 25

Transformer Specification 3006/100/CSA/WELD

Product Description:	3VA; 97V : 12 + 12v 50/60Hz Transformer, PCB Mounting.
Bobbin:	Double Section, Class UL94V0 class B, moulded bobbin, with integral moulded dividing wall, in ULTRAMID A3X2G5, UL File E41871 (M)
Bobbin Insulation Covers:	Full Insulation Cover, class UL94V0, moulded in ULTRAMID A3X2G5, UL File E41871 (M)
Windings:	All winding wires to BSEN60317-4 (BS6811 Pt3 sect 3.1) Polyurethane round copper wire Grade 1; Class 130 or higher
Primary(s):	0 – 97V 50/60Hz wound in one section of bobbin
Secondary(s):	0 - 12v @ 0.125A; 0 - 12v @ 0.125A Two concentrically wound secondaries, in other bobbin section
Core:	20.4mm Stack of Laminations to DIN 41302
Terminations:	All windings terminated to bobbin mounted pc solder pins; Phosphor Bronze plated to BS2011: 1981
Impregnation/ Encapsulation:	Completed coil and core assembly dip coated in Class F electrical impregnating varnish
Insulation:	Electrical strength and Insulation resistance tested in accordance with BSEN60742 (BS 3535 Pt 1 clause 17)
Standards complied with:	Designed and manufactured to meet the safety requirements of BSEN60742 and BSEN60950 EEC Directive LVD 73/23/EEC – CE Marking affixed
Electrical Tests:	a. No Load Magnetisation Current b. Turns Ratio nom +/- 3% c. Induced Voltage Test @ x5 Rated Input @ x12 Rated Frequency d. Simultaneous Electrical Strength Test - 2.4Kv rms Windings to Core & 4.8Kv rms Primary to Secondaries e. Examination, Fit & Function, Performance and Safety Checks carried out at 100% level.

FILOTEX UNITE PAILLART

DESCRIPTION :

LR 53335-17.
III. 4

1 : Filler

2 : 2 Cores :
- 2 cores : 19x0.08 mm Tinned Copper (0.1 mm²)
  - ETFE Insulation Ø = 0.80 mm
- 0.10 Tinned Copper Spinning
- PVC jacket (Diameter = 2.00 mm)

3 : Textile Tape

4 : Flexible PVC Jacket Ø = 7.00 +/- 0.25 mm

CHARACTERISTICS:

TS : 30 V
T° : -20 à +65°C
Weight : 50 Kg/km
Colours : insulation : black and white
internal jacket : white (natural colour)
external jacket : Mat Black
Marking : FILOTEX P 2 cores 28 AWG 60 °C E54342 P
Style 2709 30V * AWM MEMCO
* UL sigle

ELECTRIC WIRES
& CABLES PRODUCTS

DATE. Aug. 22, 2007
SPEC. No. JS07-626

MASTER CONTRACT: 173023
REPORT: 1089167 (LR 53335-17)
PROJECT: 1984996
Illustration 26 Page 1 of 4

SPECIFICATION

FOR

CROSS-LINKED POLYETHYLENE (XLPE) INSULATED
AND PVC JACKETED CABLE WITH SHIELD
(RMCV－SW－B(c2464))

signed by _____
Y. KAWANAMI

Manager
Technical section
Communication cable dept

1. SCOPE

This specification covers the construction and characteristics of the Cross-Linked Polyethylene (XLPE) insulated and PVC jacketed cable with shield.

2. SYMBOL, SIZE

The symbol and size of the cable shall be

" RMCV-SW-B(2464) AWG23/3C "

($0.3mm^2/3C$)

3. UL STANDARD

RECOGNIZED by UNDERWRITERS LABORATORIES Inc.

STYLE No.	2464 (UL 758 : AWM)
Rating TEMP.	80℃
VOLT.	300V
USE	Internal wiring or external interconnection of electronic equipment (such as desk-type calculators, dictating machines, or x-ray equipment) .

4. FLAME TESTING

The cable shall pass the vertical wire flame test (VW-1) described in UL1581, Paragraph 1080.

5. CONSTRUCTION

The construction of the cable shall conform to Table 1.

6. CHARACTERISTICS

The characteristics of the cable shall be shown in Table 2.

7. MARKING

The following information shall be indicated with a suitable method to the cable.

" —DAIDEN K.K. E91337 c𝓤us AWM 80C 300V 2464 VW-1 I/II A/B FT1 -LF- — "

MASTER CONTRACT: 173023

MESSAGE:

Dear Gabe

Here are the details you requested by email on the transformer

6VA total

INPUT: 240V, 60Hz,
(PRIMARY)

OUTPUT: 18V, 0.167A, 3VA
(EACH SECONDARY) is rated 18Vac, 3VA

VIEW FROM UNDERSIDE

Primary voltages:	0-120V,	0-120V
Secondary Voltages:	0-18V,	0-18V
Regulation	15%	
Insulation	Class 2	Double section bobbin With reinforced insulation.

Primary to Secondary withstand voltage: Greater than 3.2kV RMS

If you need any more information please don't hesitate to contact me

Best Regards

Dave Gaskin

FAO: DAVE GASKIN - 01628.410052
FROM: Dorian Geary

Transformer Specification 5014/EI42

Product Description:	5VA; 115 + 115v : 18 + 18v 50/60Hz Euro Transformer; PCB Mounting.
Bobbin:	Double Section, class UL94V0 moulded bobbin, with integral moulded dividing wall, in Technyl A20V25, UL File E44716 (M)
Windings:	All winding wires to BSEN60317-4 (BS6811 Pt3 sect 3.1) Polyurethane round copper wire Grade 1; class 130
Primary(s):	0 – 115v: 0 - 115v 50/60Hz Two concentrically wound primaries, separated by 3 layers Polyester tape, UL File E103656 (M), 0.055mm thk/layer; wound in one section of bobbin
Secondary(s):	0 - 18v @ 0.166A; 0 - 18v @ 0.166A Two concentrically wound secondaries, in other bobbin section
Core.	14.8mm Stack of Laminations to DIN 41302
Terminations:	All windings terminated to bobbin mounted pc solder pins; Phosphor Bronze plated to BS2011: 1981
Impregnation/ Encapsulation:	Completed coil and core assembly fitted in UL94V2 Nylon 66 box and encapsulated in UL94V0 resin under vacuum
Insulation:	Electrical strength and insulation resistance tested in accordance with BSEN60742 (BS 3535 Pt 1 clause 17)
Standards complied with:	Designed and manufactured to meet the safety requirements of BSEN60742 and BSEN60950 EEC Directive LVD 73/23/EEC – CE Marking affixed
Electrical Tests:	a. No Load Magnetisation Current b. Turns Ratio nom +/- 3% c. *Induced Voltage Test @ x5 Rated Input @ x12 Rated Frequency* d. 5Kv Primary(s) to Secondary(s) Electrical Strength Test e. Examination, Fit & Function, Performance and Safety Checks carried out at 100% level.

History

Customer P/N:	Wah Hing Model No.: T08770A

Dimensions and Diagram

Notes:

1. Unit: mm
2. The marking will be printed on cover or
   Pasted on cover of transformer by label for future production.
3. Pins exist at position: 1, 2, 4, 5, 6, 7, 8, 9, 10.
4. The other tolerance is follows: ±1.0mm

Customer P/N:	Wah Hing Model No.: T08770A

Electrical Characteristics

Circuit diagram:

T ---- Transformer
F1-F2 ---- Additional External Protection Device, F1=F2=160mA
Remark: The transformer need additional external protection device in it's secondary circuit when used by User, including testing in Lab. (Pls. Refer to circuit diagram for detail)

Tabel-1: Secondary loaded voltage:

Primary input			S1 (6-7) with 160mA C.F	S2 (8-9) with 160mA C.F	S3	S4	S5
115/230Vac 60/50Hz	Rated load	Load	125mA ac	125mA ac			
		Standard	12.0Vac	12.0Vac			
115/230Vac 60/50Hz	1	No Load	0mA ac	0mA ac			
		Standard	15.0Vac	15.0Vac			
115/230Vac 60/50Hz	2	Load					
		Standard					
115/230Vac 60/50Hz	3	Load					
		Standard					
	4	Load					
		Standard					

Tabel-1 notes:

1. If not specified, the secondary voltage tolerance is ±5%.

Customer P/N:	Wah Hing Model No.: T08770A

Electrical Characteristics

Standard atmospheric conditions:

Unless otherwise specified, the standard range of atmospheric conditions for marking measurements and tests are as follows:

Ambient temperature : 15℃ to 35℃
Relative humidity : 25% to 85%

If there is doubt about the results, measurement shall be made within the following limits:

Ambient temperature : 20℃± 1℃
Relative humidity : 63% to 67%

Operating temperature range:

-10℃ to +40℃

1	Output voltage and current	☑ Measured in a.c. circuit ☐ D.C. circuit including rectifying circuit	Refer to Page 4
2	Rated primary voltage	☐ 50Hz ☐ 60HZ ☑ Both 50Hz and 60Hz	115/230V
3	No load current	Input 115/230Vac, 60/50Hz	28mA or less
4	Stand-by consumption	Input 115/230Vac, 60/50Hz	---- W or less
5	Secondary voltage		Refer to Page 4
6	Insulation resistance	Apply a voltage of 500V d.c. for 1min.: Between the primary and core Between the primary and secondary	100MΩ or more
7	Dielectric strength	Between primary and secondary: 3.0KVac for 1min. 2mA Between primary and core: 3.0KVac for 1min. 2mA	No damage such as Breakdown, etc.
8	Layer dielectric strength	Apply (A) V, 400Hz for 18s to the primary terminal of (B) V. (A) 230/460V (B) 115/230V	No damage such as Breakdown, etc.
9	Primary direct Current resistance	Between terminals of 1 and 4	----Ω ±15%
10	Secondary direct Current resistance	Between terminals of 5 and 8	----Ω ±15%
11	Temperature rise	The voltage of (A) V shall be applied to the primary terminal of (B) V. Measurement shall be made after constant temperature are reached. (A) 230/460V, (B) 115/230V Secondary load conditions: ☐ All at the rated current ☑ The input voltage is increased by 10% after the rated current is set. ☐ The rated current is set, with the input voltage 10% high. ☑ Other: Ta=25℃	Windings up to: 75 K. (by the resistance method) Iron core up to: --- K. (by the thermometer method)

Customer P/N:	Wah Hing Model No.: T08770A

Electrical Characteristics

12	Damp heat	The power transformer shall be stored at an ambient temperature of 40℃±2℃ with relative humidity of 90% to 95% for 48h.Then condensation shall be removed. After which measurement shall be made within 10 min.	Insulation resistance	5MΩ or more
			Dielectric strength	Clause 7 shall be satisfied. Trip current 5mA
13	Dry heat	The power transformer shall be stored at an ambient temperature of 100℃±3℃ for 6h. After which measurement shall be made within 10 min.	Insulation resistance	5MΩ or more
			Dielectric strength	Clause 7 shall be satisfied. Trip current 5mA
14	Abnormal temperature test	☐ 15-day test ☐ Short-circuit and overload test with		Windings up to: ----K Max.
15	Beat noise (Hum)			25 dB or less
16	Thermo-protector	Primary windings built in / ℃ thermal fuse.		
17	Mass			----g (reference)

CONSTRUCTION DIAGRAM AND MATERIAL LIST

1. Internal construction

(1) Lead wire and winding shall be connected by twisting together.

(2) Thickness and materials of insulation and also creepage, clearance and thickness of insulation, shall conform to applicable safety standard.

2. Humidity resistance treatment of windings varnish impregnation

3. Tensile strength of terminals (pins)

A load of 20 N shall be applied in the axial direction. When it is retained for 60 seconds, there shall be no loosening or breakdown.

For one not exceeding 2 Kg, the static load same with the self weight shall be applied.

4. For transformers with varnish impregnation treatment, varnish stuck on the bottom or in holes shall not interfere when assembling the product.

5. Appearance

There shall be no scratches, dents, or distinct blemishes on the body, pin.

6. Fitting strength

There shall be no damage such as deformation when a static load of 20 N is applied in all directions for 60 s.

Materials List

No.	Description	Material, Thickness/Turns	Manufacture	Safety No.
1	Bobbin	PET, FR530, UL94V-0	E.I. Dupont	E41938
2	Primary Winding	Polyurethane enameled copper wire MW28C or MW75C	Ta win	E152187
			Pacific-thai	E142108
3	Secondary Winding	Polyurethane enameled copper wire MW28C or MW75C	Ta win	E152187
			Pacific-thai	E142108
4	Inserting pins	Copper alloy	WELL FORE	None
5	Lamination Core	Silicon steel sheet, thickness 0.50mm	Nippon steel	None
6	Bobbin cabinet & cover	Nylon 66, 101F or 101L	E.I. Dupont	E41938
7	Core outer wrap	Polyester tape, 0.05mm.t.,	SYMBIO	E50292
8	Between primary Windings insulation	Polyester tape, 0.05mm.t.,	SYMBIO	E50292
9	Primary outer wrap	Polyester tape, 0.05mm.t.,	SYMBIO	E50292
10	Primary coil insulation	Polyester tape, 0.05mm.t.,	SYMBIO	E50292

1. All materials meet ROHS requirement.
2. Please advise if customer have any special requirements.

Otherwise, all materials may be substituted by other equivalent manufacturer.
